#### Specification

1. The abstract of the disclosure is objected to because it is not one paragraph. Correction is required. See MPEP § 608.01(b).

## Information Disclosure Statement

- 2. The information disclosure statement is objected to because per MPEP 609, 37 CFR 1.98 (b),
- (1) each US patent must be identified by inventor, patent number, and issue date. Correction is required.

## Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 4, 8 and 13 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 4 recites "The method of claim 1 wherein step (d), prior to step (a), comprises applying a sequence of voltages during power-on." Examiner suggests 'The method of claim 1 further comprising step (d) ............'

Claim 8 recites "(a) at least one power source, (d) circuitry coupled to a power source." It is difficult to ascertain whether applicant is claiming one power source or two power sources.

Serial Number: 09/823,079

Art Unit: 2858

Claim 13 recites "one connector" and the "other connector" Examiner suggests "the first connector" and "the second connector" respectively.

## Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 5. Claims 1-3, 8-10 and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Arnoldi (USPAT 3,979,672).

With respect to claim 1, Arnoldi discloses (a) applying a nominal voltage to an electronic component [Fig 1, 10], (b) introducing a voltage disruption to the nominal voltage [Fig 1, 30], (c) repeating the voltage disruption for a specified number of instances [Fig 1, 30].

With respect to claims 2 and 9, Arnoldi discloses wherein a voltage disruption comprises applying an increase in voltage [col 2, lines 5-10, col 6, line 57 through col 7, line 11].

With respect to claims 3 and 10, Arnoldi discloses a voltage disruption comprising a decrease in voltage [col 2, lines 44-53]

With respect to claim 8, a connector from the circuitry to a device is inherent in Fig. 1

Art Unit: 2858

With respect to claim 17, Arnoldi discloses a means for generating a voltage disturbance [[Fig 1, 30]

#### Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 11-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Arnoldi (USPAT 3,979,672) as applied to claims 1 and 8 above.

With respect to claim 11, Arnoldi discloses the claimed invention except for wherein there are multiple power sources that comprise multiple voltage magnitudes. It would have been obvious at the time the invention was made to modify Arnoldi to include wherein there are multiple power sources that comprise multiple voltage magnitudes since it has been held that mere duplication of the essential working parts of a device involves only routine skill in the art. St Regis Paper Co. v. Bemis Co., 193 USPQ 8.

With respect to claim 12, Arnoldi discloses both a decrease [col 2, lines 44-53] and an increase [col 2, lines 5-10, col 6, line 57 through col 7, line 11] in voltage

Serial Number: 09/823,079

Art Unit: 2858

With respect to claim 13, Arnoldi discloses the essential elements of the claimed invention except for wherein there are two connectors linked from the circuitry to two separate devices, one connector configured for the voltage disturbances that are due to an increase in voltage and the other connector configured for the voltage disturbances that are due to a decrease in voltage. It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Arnoldi to include two connectors linked from the circuitry to two separate devices, one connector configured for the voltage disturbances that are due to an increase in voltage and the other connector configured for the voltage disturbances that are due to a decrease in voltage since it has been held to be within the general skill of a worker in the art to make the connectors separable on the basis of its suitability for the intended use as a matter of obvious design choice. Nerwin v. Erlichman, 168 USPQ 177.

With respect to claim 14, Arnoldi discloses a computer to specify certain operating parameters [Fig 1, 36]

Claims 4, 6, 7 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Arnoldi (USPAT 3,979,672) as applied to claims 1, 11 above, in view of Sarles et al (USPAT 6,359,426).

With respect to claims 4, 6 and 15, Arnoldi discloses the essential elements of the claimed invention except for applying a sequence of voltages during power-on, wherein a second

Art Unit: 2858

voltage is activated in a specific time after a first voltage was activated. Sarles discloses applying a sequence of voltages during power-on, wherein a second voltage is activated in a specific time after a first voltage was activated [Fig 7]. It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Arnoldi to include applying a sequence of voltages during power-on, wherein a second voltage is activated in a specific time after a first voltage was activated as taught by Sarles for the purpose of not stressing the DUT during start-up.

With respect to claim 7, Sarles discloses computer software controls [Fig 7].

Claims 5 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Arnoldi (USPAT 3,979,672) as applied to claims 1, 11 above, in view of Nakagawa (USPAT 4,328,570).

With respect to claims 5 and 16, Arnoldi discloses the essential elements of the claimed invention except for wherein step (d) comprises applying a sequence of voltages during poweroff, wherein a second voltage is deactivated a specific amount of time after a first voltage was deactivated. Nakagawa discloses applying a sequence of voltages during power-off, wherein a second voltage is deactivated a specific amount of time after a first voltage was deactivated [Fig. 2A]. It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Arnoldi to include wherein step (d) comprises applying a sequence of voltages during power-off, wherein a second voltage is deactivated a specific amount of time after a first

Art Unit: 2858

voltage was deactivated as taught by Nakagawa for the purpose of providing a controlled shut-down.

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Etienne (Steve) LeRoux whose telephone number is (703) 305-0620.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, N. Le, can be reached at (703) 308-0750.

Any inquiry of a general nature relating to the status of this application or processing procedure should be directed to the receptionist whose telephone number is (703) 308-0956.
